## CR-TEC Engineering <br> Automated Valve Solutions

## ER \& V OPTIONS

Installation and Operation Manual

ECD.1A
ECM.1\&2

## EPR.B

## EPT.C

## EFC. 2

This product meets the European Directive 2012/19/UE about electrical and electronic equipment (DEEE). It mustn't be mixed with common waste. Please, recycle or dispose of them according to your country laws.

Type : ECM

Type: ECD
ER only

| ECD.1A | ECM.1 | ECM.2 |
| :---: | :---: | :---: |
| $3 P+$ T DIN43650 connector. | $1 \times$ M12 connector. | $2 \times$ M12 connector. |
|  |  |  |
| IP66 | IP67 | IP67 |

ASSEMBLY AND DIMENSIONS (ECD.1A)

Our cable glands are designed for cables with a diameter between 7 mm and 12 mm .

Foresee a shunt between 4 and 6 (customer wiring)

| REP | DESIGNATION |  |  |  |  |
| :---: | :--- | :---: | :--- | :--- | :--- |
| FC0 | Open limit switch | FC1 | Auxiliary limit switch 1 | D1/D2 | Failure report Terminal strip (24V DC / 3A max) (ER <br> PLUS) |
| FCF | Close limit switch | FC2 | Auxiliary limit switch 2 | M | Motor |

| REP | DESIGNATION |  |  |  |  |
| :---: | :--- | :---: | :--- | :---: | :--- |
| FC0 | Open limit switch | FC1 | Auxiliary limit switch 1 | D1/D2 | Failure report Terminal strip (24V DC / 3A max) (ER <br> PLUS) |
| FCF | Close limit switch | FC2 | Auxiliary limit switch 2 | M | Motor |

## DESCRIPTION

Feedback potentiometer when control of position feedback is needed with 100, 1000, 5000 or 10000 Ohms to integrated inside actuators.

| Rep. | Designation |  |
| :---: | :--- | :--- |
| 1 | Drive gear |  |
| 2 | Security spring |  |
| 3 | Potentiometer gear |  |
| 4 | Screws |  |
| 5 | Potentiometer |  |
| 6 | Potentiometer card |  |
| 7 | Potentiometer terminal block |  |

- The "customer" terminal must be connected with rigid wires. If the applied voltage is higher than 42 V , the user must foresee a fuse in the power supply line.
- For a use with a long power supply wiring, the induction current generated by the wires musn't be higher than 1mA

## ELECTRIC WIRING

| REP | DESIGNATION |
| :---: | :--- |
| P | Potentiometer |
| R | Feedback Information |
| PH | Phase |
|  |  |

Inverted values between terminals 20 and 21.

| TECHNICAL DATA |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| TYPE | EPR.01.B | EPR.1.B | EPR.5.B | EPR.10.B |
| Data (Ohms) | 100 | 1000 | 5000 | 10000 |
| Travel Angle |  | $\left(0^{\circ}-270\right.$ | equest) |  |

## Linearity

+/-5\%

## Tolerance

+/-10\%

## Temperature

$-55^{\circ} \mathrm{C}$ to $+125^{\circ} \mathrm{C}$

## Power

> 1W max

Max. Voltage
$10 \mathrm{~V}(0.1 \mathrm{~A}) \quad 30 \mathrm{~V}(0.03 \mathrm{~A}) \quad 70 \mathrm{~V}(0.014 \mathrm{~A}) \quad 100 \mathrm{~V}(0.01 \mathrm{~A})$

## DESCRIPTION

Transmitter when control of position feedback is needed with $0-20 \mathrm{~mA}, 4-20 \mathrm{~mA}$ or $0-10 \mathrm{~V}$ per $90^{\circ}$ to integrate inside actuators of ER PREMIER, ER PLUS and $V$ ranges.

| Rep. | Designation |  |
| :---: | :--- | :--- |
| 1 | 5K potentiometer |  |
| 2 | Potentiometer gear |  |
| 3 | Drive gear |  |
| 4 | Security spring |  |
| 5 | EPT.C card |  |
| 6 | Screws |  |

DIMENSIONS

- The speed allowed by the resolution of this converter doesn't make it possible to use it for speeds lo-wer than 10 seconds (1/4 of turn).

| Rep. | Designation |  |
| :---: | :--- | :--- |
| A | Mode selector |  |
| B | 24V DC terminal strip |  |
| C | Feedback information connector |  |
| D | Buttons |  |
| E | LED 2 (Green) |  |
| F | LED 1 (red) |  |

## TECHNICAL DATA

| POWER SUPPLY |  |
| :--- | :---: |
| EPT.C used with a <br> card of PLUS | $12-48 \mathrm{VDC} \quad 15-30 \mathrm{VAC}$ |
| INPUT | $90^{\circ}+/-10 \% \quad 180^{\circ}+/-10 \%$ |
| Travel angle | $2.3 \quad 1.3$ |
| Gear's ratio | 10 Mesures $/ \mathrm{Seconde}$ |
| Conversion speed | $-10^{\circ} \mathrm{C} /+60^{\circ} \mathrm{C}$ |
| Temperature | $4-20 \mathrm{~mA} / 0-20 \mathrm{~mA}$ |
| OUTPUT | $20 \mu \mathrm{~A}$ |
| Resolution | $8 \%$ |
| Full scale accuracy | 800 Ohms |
| Maximum load <br> re-sistance | $0-10 \mathrm{~V}$ |
| OUTPUT | 10 mV |
| Resolution | $+/-5 \%$ |
| Full scale accuracy | K Ohms |
| Minimum load <br> re-sistance |  |

ELECTRIC WIRING

## PROGRAMMING SEQUENCE

## 1 Shunts positioning (before each modification)

- Position the shunts as follows :

|  | 1 | 2 | 3 | 4 |
| :--- | :---: | :---: | :---: | :---: |
| $0-10 \mathrm{~V}$ | OFF | N/A | OFF | ON |
| $0-20 \mathrm{~mA}$ | OFF | N/A | ON | OFF |
| $4-20 \mathrm{~mA}$ | ON | N/A | ON | OFF |

## 2 Connection:

- Connect the power supply ( 24 V AC/DC) to the terminals 17 and 18
- Connect the feedback signal to the terminals 13 (+) and 14 (-)

## 3 Initialization:

Press the MEM + CLOSE + OPEN button, and apply the operating voltage to the card, keeping the buttons pressed. The two LED lights up. Release the buttons and wait until the LED light off. Disconnect the power supply card .

## 4 Setup :

### 4.1 Signal type choice:

- 4-20mA feedback signal: Press the MEM + CLOSE buttons and apply the operating voltage to the card, keeping the buttons pressed. The red LED lights up 3 times. Release the buttons and disconnect the power supply card .
- 0-20mA feedback signal: Press MEM + OPEN buttons and apply the operating voltage to the card, keeping the buttons pressed. The red LED lights up 3 times. Release the buttons and disconnect the power supply card.
- 0-10V feedback signal: Press MEM button and apply the operating voltage to the card, keeping the button pressed. The red LED lights up 3 times. Release the button and disconnect the power supply card.

### 4.2 Learning mode

- Press the OPEN + CLOSE buttons and apply the operating voltage to the card, keeping the buttons pressed. The 2 LED light up. Release the buttons, the 2 LED light off. Le mode The learning mode is selected.
- Operate electrically the actuator to its closed position.
- Save the closed position by pressing MEM + CLOSE, the red LED lights up 2 times to confirm.
- Operate electrically the actuator to its open position
- Save the open position by pressing MEM + OPEN, the green LED lights up 2 times to confirm
- The positions are saved. disconnect the power supply card.

|  | Open position | Closed position |
| :--- | :---: | :---: |
| $0-10 \mathrm{~V}$ | $10 \mathrm{~V}(100 \%)$ | $0 \mathrm{~V}(0 \%)$ |
| $0-20 \mathrm{~mA}$ | $\mathbf{2 0 m A}(100 \%)$ | $0 \mathrm{~mA}(0 \%)$ |
| $4-20 \mathrm{~mA}$ | $20 \mathrm{~mA}(100 \%)$ | $4 \mathrm{~mA}(\mathbf{0} \%)$ |

## NOTE:

It's possible to link the terminals 17 and 18 of the power supply card with the terminals 17 and 18 of the EPT.C to execute the parameters selection sequence. However, in the case of a use without permanently power supply, the feedback information won't be available during "out of power" phases.
In this case, to insure the permanence of the feedback information, connect the EPT.C card to an external continuous power supply.

## DESCRIPTION

2 limit switches card allowing an extra feedback information

| Rep. | Designation |  |
| :---: | :--- | :--- |
| $\mathbf{1}$ | Circuit board |  |
| 2 | End limit switches |  |
| 3 | Terminal strips |  |
| 4 | Plastic bracket |  |
| 5 | Cams and circlips |  |
| 6 | M2,2x6,5 screws |  |

ELECTRIC WIRING

| REP | DESIGNATION |
| :---: | :--- |
| FC3 | Auxiliary limit switch 3 |
| FC4 | Auxiliary limit switch 4 |
| R | Feedback information |

## TECHNICAL DATA

| 12 to 250 V AC and 4 to 24 V DC | Min. 100 mA | Max. 5 A (resistive), 0.5 A (motor), 0.125 A (capacitive loads) |
| :--- | :--- | :--- |
|  |  |  |
|  |  |  |
|  |  |  |

- The "customer" terminal must be connected with rigid wires. If the applied voltage is higher than 42V, the user must foresee a fuse in the power supply line.
- For a use with a long power supply wiring, the induction current generated by the wires musn't be higher than 1 mA
